Fig 1

Fig 2

This technical drawing illustrates a cross-section of a mechanical device, possibly a pump or a specialized valve. The central component is a vertical shaft (1) that passes through a housing (2). At the top of the shaft, there is a piston-like structure (3) which is part of a larger mechanism involving a crankshaft (4) and connecting rod (5) at the base. A coiled spring (27) is situated above the piston. The assembly is sealed at multiple points, as indicated by labels 12, 13, 15, 16, 17, 19, 23, 24, 26, and 28. Arrows show the direction of fluid flow: entering from the left side (indicated by arrow 24), moving down through the central passage (indicated by arrow 7), and exiting from the right side (indicated by arrow 26).
